

## CP TC12 - 12 kV Oil Test Cell

Accessory to CPC 100

The CP TC12 is used in conjunction with the CPC 100 and CP TD1 to measure tangent delta / power factor and permittivity of insulation liquids, e.g. transformer oil. The three-electrode design with guard allows precise measurement, especially of small losses.

The circular electrodes are constructed from rigid stainless steel and require a sample of 1.2 to 2 liters / 41 to 68 fl.oz.

Electrical connection to the Test Cell is made using the standard cables provided with the CP TD1.
